

VoIP ANALYSIS

A CommSave Managed Service

IS VOICE OVER IP RIGHT FOR YOUR COMPANY?

It may well be true that there are business productivity gains as a result of deploying VoIP, but can you actually measure and quantify them – let alone guarantee them? Forget about the spin and hype associated with VoIP “improved efficiency”, and the superb integration of applications that “enhance business productivity”. Does VoIP save your company money and if so how much?

CommSaves VoIP Management Service measures the cost of capital in deploying the solution against the savings that will be delivered, utilising real, quantifiable information, not that estimated by the supplier.

- + Factually based independent analysis
- + Provision of impartial analysis of current cost profiles
- + Detailed ROI reports assist in analysis of proposals from multiple suppliers

The type of information provided includes a detailed capital expenditure and savings analysis, a Net Present Value (NPV) calculation, an Internal Rate of Return (IRR) percentage and a Payback calculation. All of this information is based upon your actual cost profile today and utilises metrics that your company views as appropriate in making decisions relating to capital investment.

Furthermore if your company engages CommSaves Cost Management Services we will monitor and guarantee those savings

CommSaves Managed Services Portfolio

CommSaves VoIP Analysis Service is part of a range of services available from the ManageTrack™ portfolio of managed services. Services from this portfolio are complimentary to each other and may be combined to further leverage your company's investment in its communications network.

Total Telecoms Cost Management

Significant – Sustainable – Savings
